

APPLICATION

Used to prefilter the supply air. Separation of larger particles of pollutants contained in the air prolongs the service life of devices placed behind the filter - fans, heaters, etc.

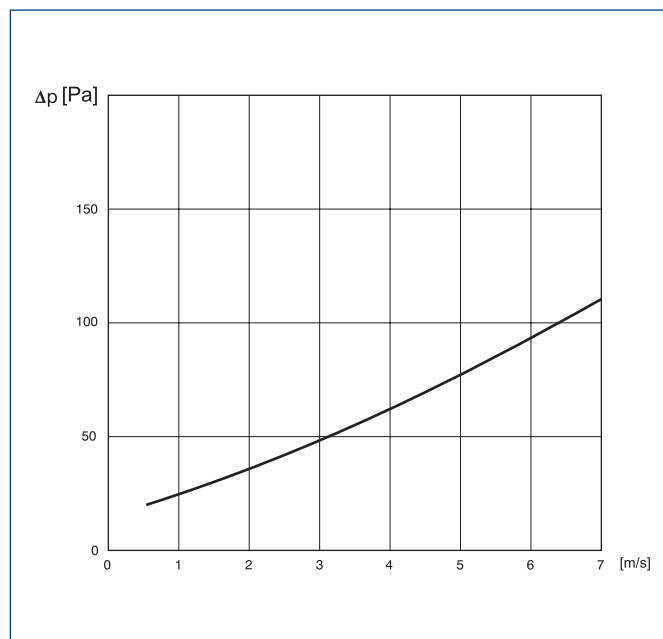

CONSTRUCTION

Channel filters designed for installation in circular ducts with standard diameters (100-400mm).

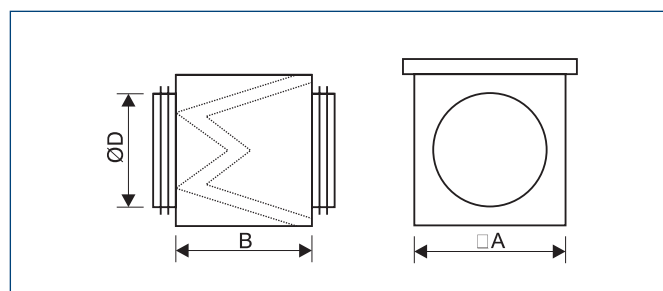

Housing made of galvanized sheet steel, rubber fitting seals, EU3 filter cartridge on profiled steel wire mesh.

On request, the device can be supplied in any colour from the RAL palette.

CHARACTERISTICS OF PRESSURE LOSS
